Why should I know about project management?

- It is important to research as much information you can about possible career- and study options before you start with a qualification.
- Project management is an important workplace skill and an excellent supplement to existing qualifications or experience.

How will this information help me?

- It will provide you with insight into what project management is.
- It will help you gain more information about the skills needed in project management.
- It will help you identify possible career fields in project management.
- It will assist you in exploring project management qualifications offered by Unisa.
What is project management?

Project management can be described as the discipline of initiating, planning, executing, controlling, and closing the work of a team to achieve specific goals and meet specific success criteria. Simply put, project management is all about setting and achieving reasonable and attainable goals. It is the process of planning, organizing, and overseeing how and when these goals are met (What is Project Management? [https://en.wikipedia.org/wiki/Project_management]).

What is a project?

A project is a temporary endeavour designed to produce a unique product, service or result with a defined beginning and end (usually time-constrained, and often constrained by funding or deliverables) undertaken to meet unique goals and objectives, typically to bring about beneficial change or added value. The temporary nature of projects stands in contrast with business as usual (or operations), which are repetitive, permanent, or semi-permanent functional activities to produce products or services.
What do project managers do?

Project Managers orchestrate all aspects of time-limited, discrete projects. In practice, the management of these two systems is often quite different, and as such requires the development of distinct technical skills and management strategies. For instance, a project manager who is overseeing the development of a new product or service may manage departments such as marketing, IT, and human resources.

Challenges faced in project management

Project management is a field where there is no scarcity of employment because they are always in need to launch new products, develop new technology and manage alliance programs with strategic partners. The primary challenge of project management is to achieve all of the project goals within the given constraints. This information is usually described in a user or project manual, which is created at the beginning of the development process. The primary constraints are scope, time, quality and budget. The secondary challenge is to optimize the allocation of necessary inputs and integrate them to meet pre-defined objectives.
Effective project manager skills

Basic skills that are important when working within a fast-changing society include communication skills (reading, writing, creating online content, communicating visually and evaluating information); social intelligence (connecting meaningfully with others and wanting to make a difference); teamwork (negotiating, motivating and engaging with diverse groups online and offline); problem solving and novel thinking (creating unique solutions to problems) and information management (filtering and making sense of information).

Think about your life experiences (work, volunteering, school, studies and personal) and then answer the following questions:

1. What skills do I have?
2. What skills do I need to develop related to the kind of opportunities I am hoping for?
3. How will I develop these skills?

As with most careers there are certain skills that the candidate is required to possess. Skills needed to be an effective project manager may include:

- Ability to multitask
- An orientation towards getting things done
- Analytical thinking
- Strong communication skills
- Strong leadership skills
- The ability to set and stick to a schedule
Qualities of a project manager

Various sources have stated that effective project managers possess qualities such as, but not limited to:

They are organised, naturally command authority, clear vision, be an extrovert, accountability, possess quick shifting abilities (knowing what to note and what to work), ability to delegate, leadership competence, empathetic, pragmatic, prioritise ruthlessly, a strong sense of teamwork, challenge assumptions and self-imposed limitations, manage the client’s expectations, charismatic, anticipate and accommodate for change, look forward to doing work, ask good questions and listen to stakeholders, have an attitude of gratitude and thank those who helped them succeed, and so forth.

For more information on the different qualities and personality traits of a good project manager visit the following website:

Download the Career research brochure [here](http://www.unisa.ac.za/static/corporate_web/Content/About/Service%20departments/DCCD/Documents/career_research_interactive_unisa.pdf) to learn more about different ways you could find information related to your career decision.

Professional associations for project management

Association for Project Management South Africa (APMSA)

The Mission of APSMA is to promote professional project management and move people forward. Professional project management means a deep understanding of project and general management tools, techniques and what is considered as “best practices”. It requires a fundamental understanding of business and wealth creation processes. It requires a suite of value and guiding principles that will permit the project manager to do what is right rather than just expedient decision making.
Respect for values and cultures, health and safety, and the environment of the interested parties is a paramount.

SA Council for Project and Construction Management Professionals (SACPCMP)

The South African Council for Project and Construction Management Professions (SACPCMP) is a Juristic person established by Section 2 of the Project and Construction Management Act (Act No 48 of 2000).

The SACPCMP was established to regulate Construction Management and Construction Project Management Professionals to protect the public.

For more information on the SACPCMP visit their official website at: http://www.sacpcmp.org.za/.

Project management certification

You can choose to complete the necessary requirements to become a certified professional in project management. The Project Management Institute offers Project Management Professional (PMP) certification (http://www.pmi.org/certification/project-management-professional-pmp.aspx). The certification is an indication to employers that you have the necessary skills and
knowledge related to project management. This certification may also be a requirement for some project management positions.

Think about…

- Why are you interested in project management?
- Where does your interest come from?
- Where are you hoping to be in five/ten years’ time?
- What kind of opportunities are you hoping your studies in project management will prepare you for?

Interests are important to our choices. If you’re interested in working with people, for example, how would you want to help them? If you’re interested in working with money, would you want to manage other people’s money?

What do you like doing? Write down at least three activities that you really enjoy (for example, reading books, gardening and playing soccer). Make some notes on how they relate to your interest in studying project management.

Your qualification will equip you with subject-specific knowledge and a number of work-related skills (transferable skills), for example the ability to learn fast in new situations, to work independently, and to analyse, evaluate and interpret data. You should be able to identify and articulate the skills that you feel you are gaining through your studies. While you are busy with your studies, you need to reflect continuously on how you could apply the skills that you are learning to contribute to your professional development and who will be able to benefit from what you already know.
Project Management qualifications at Unisa

Unisa does not offer a specialised formal qualification in project management. If you are interested in completing a diploma or degree, you need to consider what skills you need to develop in order to be effective as a project manager, as well as which industry you plan to work in. Before you make your choice as to which programme to take, we encourage you to speak to individuals in your field/ economic sector to gather information about the suitability of a particular programme. For more information about beginning a career in project management and to help you select a qualification, you can read this article:

What is a Short Learning Programme?

Short Learning Programmes (SLPs) offered by Unisa focus on “just in time” and “just enough” learning to meet a specific learning need identified by society. This need can focus on enabling access to other Short Learning Programmes or to improve access to the study of formal qualifications at Unisa, or it can address a specific need in the workplace. Short Learning Programmes can update or broaden skills and knowledge in a specific area to enable life-long learning. In this manner, Short Learning Programmes assist students with their continuing professional development by upgrading their skills and knowledge in newly developed areas or by sharing the results of research.

These programmes are offered by various centres within the university, each with their own processes, rules and contact details. It is important to note that Short
Learning Programmes are by nature short. They are not formal qualifications. Please note that Unisa is a public higher education institution established in terms of the Higher Education Act (Act 101/1997) and does not have or require a provider registration number at the Department of Education or SAQA.
### Summary of Short Learning Programmes
