Frequently-asked questions

I did not obtain an average of 60% for my undergraduate studies and now I do not qualify to continue with my Honours degree. What now?

I did not complete psychology as a major for my undergraduate degree and I now want to study further in this field. What now?

I did not complete industrial psychology as a major for my undergraduate degree and I now want to study further in this field. What now?

I want to be a child psychologist – what should I study?

Why are only a limited number of students selected each year for the professional training programmes at Master’s level?

What do I do if I am not selected for a professional training programme (such as the MA Clinical Psychology)?

What selection criteria are used for the MA Clinical Psychology programme?

I am not close to Pretoria – can I apply for the MA Clinical Psychology?

Would I be able to practice as a counsellor/psychologist in another country?

Unisa is currently not offering the BPsych equivalent programme for registered counsellors/psychometrists – what now?

What are the practical issues I should consider in terms of the Masters in Psychology (Clinical Psychology)?

Career development services at Unisa

The information in this document was correct as on 10 August 2019. Visit the Directorate: Counselling and Career Development website (http://bit.ly/30ygrl1) for the latest version of this document.
Introduction

There is great diversity in the field of psychology. On the continent of Africa, psychology has much to explore and to research. Unisa is in a unique position to facilitate such exploration as its teaching extends beyond South Africa’s borders. The prospect of contributing to psychological knowledge from an African perspective in all its diverse forms remains an inspiring challenge.

According to the American Psychological Association (2003), the study of psychology is a good preparation for a variety of professions. A number of employers are interested in the skills that Psychology majors can bring to collecting, analysing and interpreting data. All Unisa’s Psychology, and Industrial and Organisational Psychology modules and qualifications could be listed to demonstrate their usefulness in developing skills for diverse contexts.

You may be aware of the therapeutic side of psychology as a prospective career direction. You feel anxious at the start of their studies when a guarantee that you will be accepted into a professional training programme (at Master’s level) cannot be provided. Fixated on the idea that only professional psychologists are employed meaningfully, you might limit your career investigations as well as your creative abilities to use your psychology background to prepare for other opportunities. The question is: how innovative can you be to turn your academic studies into a satisfying career while meeting the needs of the South African community and the Pan-African community in general?
How to use this brochure

We first started producing this brochure in 2007. Over the years, we have updated the brochure to reflect the changing landscape of training for psychologists in South Africa, and most importantly, to accommodate the needs of students and applicants who need information to make effective career choices.

You can choose to work through all the information and activities in the brochure, or you can skip certain sections depending on your needs. You are making an important career decision – take some time to complete all the activities. We recommend that you make notes and a list of further questions as you are working through the information.

We welcome your feedback

If you have any comments about this brochure, or would want to make suggestions for improvement, please send an e-mail to Leza Deyzel (deyzel@unisa.ac.za).
Career planning self-assessment

Where are you now with your career planning? Complete the following self-assessment to help you be aware of the aspects you still need to pay attention to in terms of your career planning.

Activity

The following questions may help you to think about important aspects regarding planning your career in psychology. Your honesty when completing these questions will help you to have a realistic picture of what you could still possibly do to make effective career decisions.

<table>

# Career options

Psychology is a field with diverse interest and specialisation areas. Below is a summary of the various fields in psychology, as reflected in the various divisions for psychological associations internationally. Have you thought about the area(s) in psychology that you are most interested in? To give you an idea of the scope of the field, the following is a summary of the various divisions related to different professional psychology organisations.

## American Psychological Association (APA)

Canadian Psychological Association (Canada)

Aboriginal Psychology  Extremism and Terrorism
Adult Development and Aging  Family Psychology
Brain and Behaviour  Health Psychology
Clinical Psychology  History & Philosophy of Psychology
Clinical Neuropsychology  Industrial and Organizational Psychology
Community Psychology  International and Cross-Cultural Psychology
Counselling Psychology  Perception, Learning and Cognition
Developmental Psychology  Psychoanalytic & Psychodynamic Psychology
Education  Psychology in the Military
Environmental Psychology

British Psychological Society (BPS)

Clinical psychology  Health psychology
Counselling psychology  Neuropsychology
Educational and child psychology  Occupational psychology
Forensic psychology

Psychopharmacology  Psychology and Religion
Rural and Northern Psychology  Sexual Orientation and Gender Identity
Social and Personality Psychology  Sport & Exercise Psychology
Substance Abuse/Dependence  Teaching of Psychology
Traumatic Stress  Teachers and Researchers in Psychology
Women and Psychology (SWAP)
There is a distinction between the academic and the practitioner route in Psychology, Industrial and Organisational Psychology and Educational Psychology:

<table>
<thead>
<tr>
<th>Academic route</th>
<th>Professional route</th>
</tr>
</thead>
<tbody>
<tr>
<td>The academic route allows one to pursue a professional career in research, teaching and some fields of psychological practice, excluding psychological testing, psychotherapy, and counselling.</td>
<td>The practitioner route means training as a registered counsellor, psychometrist or psychologist in order to register in one of the registration categories offered by the Health Professions Council of South Africa. Currently, the following categories are available: registered counsellor, psychologist, and psychometrist (independent practice).</td>
</tr>
</tbody>
</table>
It is important to do career research about the various options available. Inadequate research could lead to unrealistic expectations of what a career in psychology entails. Thorough research in terms of career options will enable you to broaden your knowledge about alternative careers should you not be selected for, or not wish to continue with postgraduate studies in psychology.

Preparing for opportunities and planning your career

“Don’t ask kids what they want to be when they grow up but what problems do they want to solve. This changes the conversation from who do I want to work for, to what do I need to learn to be able to do that.”

Jaime Casap, Google Global Education Evangelist

One way of preparing for opportunities and planning your career is to think about the type of problems you would want to be able to solve. This will help you to focus on what you wish to contribute, and not necessarily on, who you want to “become”. Once you have identified some of the problems you would want to focus on, you can then explore how individuals from different academic and professional backgrounds are addressing these problems. Then, you could start thinking about how you would want to contribute and what you will need to do in order to prepare for this.

Activity

Think about your environment (family, community, South Africa, Africa, international) and what problems or challenges you know about. Perhaps you have even thought of possible solutions to these challenges. Write down some of the problems or challenges you would want to address.
Problems/ Challenges

Next, think about how you would want to contribute to addressing some of these problems/ challenges. What would your role be? Also, think about how you would need to start preparing for the roles you identified (think about education, work/ volunteer experience).

<table>
<thead>
<tr>
<th>Problems/ Challenges</th>
<th>My role</th>
<th>How do I need to prepare</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

The following are some ideas of challenges/ problems experienced across the world, including South Africa.

- Access to digital technologies
- Access to education
- Access to employment
- Access to mental health services
- Access to primary health care
- Affordable energy
- Ageing world population
- Cancer
- Child labour
- Clean air
- Clean energy
- Clean fuel
- Clean water
- Climate
- Climate change
As an example, you may want to address the problem of violence against children. Think about the different individuals that may be able to contribute to the solving of this problem: police officers, social workers, educators, legal professionals,
psychologists, and community development practitioners. In the field of psychology, a clinical psychologist may focus on therapy for the affected child; a counselling psychologist could address coping strategies for parents; a research psychologist may do research related to the impact of violence against children, and an educational psychologist may offer support to children within the school context. As a psychology student or graduate, you may volunteer to work with community-based organisations that work with children.

What can I do with a Bachelor’s or Honours degree?

You need to consider that training in psychology equips you with theoretical, practical and transferable skills that you could possibly apply in a variety of contexts. For example, psychology graduates could work in different capacities in the following fields:

- For-profit organisations (HR, marketing, project management, research, consulting, coaching)
- Research institutions (Human Science Research Council, Institute for Safety and Health Studies, Unisa Centre for Applied Psychology, to name a few)
- Government (Departments of Labour, Social Development, SAPS and Correctional Services)
- Non-profit organisations (Non-governmental organisations, Non-profit organisations, Community-based organisations - think local, national and international)
- Higher education (Universities and Universities of Technology)
- Schools (government and private)
- Other educational organisations (e.g. FET colleges and private training organisations)

Complete the career research activities that follow to identify even more opportunities related to your psychology studies.
Identify opportunities with career research

How do you identify opportunities?

Your career research will connect you to others who will help you to answer questions you have with relation to your career choice; expand your understanding of the opportunities related to your career vision; identify “hidden” career paths that you did not think of previously; and think about how you could plan to pursue specific opportunities.

Prepare

Think about what you still need to find out: what questions do you have? You will use these questions as a starting point to structure your research. Examples of questions include “What can I do with a major in...”, “How much do psychologists earn?” or “What must I study to be ...?”

<table>
<thead>
<tr>
<th>My questions</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
</tr>
<tr>
<td></td>
</tr>
<tr>
<td></td>
</tr>
<tr>
<td></td>
</tr>
</tbody>
</table>

Keep track of information

Keep track of your research by making notes about what you learn and what you still need to find out.
Evaluate

Evaluate the information that you are finding: Who wrote the information (person/organisation)? Which country does the information relate to? When was the information last updated? After you have visited a number of websites, you could reflect on what you found – what are the similarities and differences? What else do you need to find out?

Ways to do career research

1 Online search

Use a search engine such as Google to search for information related to your questions. For example, you need to find out about career opportunities related to psychology. You could start with using keywords such as “careers in psychology”. To further contextualise your findings, you could search keywords such as “careers in psychology Africa” and “careers in psychology South Africa”. Scan the brief descriptions of the first ten results and decide which website you would want to explore first. Skim-read through the information on the website (start with the headings) to get an understanding of the content of the page and to find information related to your question. Also, check whether there are links to other websites that you could further explore. As you are reading, make a summary of the information. You could use the information you find to make lists of job titles related to your field of study, organisations that employ individuals in these fields and professional organisations.

Remember to bookmark pages that you would want to return to and make notes about what you find and what you would still like to find out. Use online services or apps such as Evernote (http://www.evernote.com), Diigo (http://www.diigo.com) or Google Bookmarks (http://www.google.com/bookmarks/) to keep track of your research online.
# Activity

Use Google to find specific job titles related to psychology as a major. The following are some search terms you could consider: “job titles psychology graduates”; “job titles psychology graduates south africa”; “jobs for psychology graduates with bachelor degree”. Note the job titles below.

<table>
<thead>
<tr>
<th>Job title</th>
<th>Website</th>
</tr>
</thead>
<tbody>
<tr>
<td>Examples:</td>
<td>Quintcareers.com</td>
</tr>
<tr>
<td>Career counsellor</td>
<td>Quintcareers.com</td>
</tr>
<tr>
<td>Human resources assistant</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
</tr>
</tbody>
</table>
The following websites will help you to learn more about specific job titles:

<table>
<thead>
<tr>
<th>Website</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Unisa Counselling &amp; Career Development</td>
<td>This website provides more information about opportunities related to qualifications at Unisa.</td>
</tr>
<tr>
<td>National Career Advice Portal</td>
<td>Search for information about specific job titles.</td>
</tr>
<tr>
<td>Career Planet</td>
<td>Learn more about different career areas, including social and community services. The website also contains information about learnerships and student finance</td>
</tr>
<tr>
<td><a href="http://www.careerplanet.co.za/">http://www.careerplanet.co.za/</a></td>
<td></td>
</tr>
<tr>
<td>O*Net</td>
<td>Explore job titles related to different categories such as your interests, skills, values, typical work activities, and more. You could also browse through groups of occupations related to specific industries or economic sectors.</td>
</tr>
<tr>
<td>Prospects</td>
<td>Explore different job titles related to job sectors, as well as what you could do with your major subject.</td>
</tr>
<tr>
<td><a href="http://www.prospects.ac.uk/">http://www.prospects.ac.uk/</a></td>
<td></td>
</tr>
</tbody>
</table>
### Activity

Go to any of the above occupational information websites and search for the job titles you identified during the Google search activity.

Use the tables below to explore your top three occupational interests.

*Example table:*

<table>
<thead>
<tr>
<th>Job title</th>
<th>Website</th>
<th>Related job titles?</th>

</tbody>
</table>
3 Job-search portals

Job search portals are useful in terms of researching specific job titles linked to different industries is job search portals. Finding jobs advertisements that interest you is a worthwhile activity, even if you are not currently applying for jobs. You may not yet be eligible to apply for your dream job, but you can still gain a lot of information that can be applied to your career planning. For example, you are interested in psychology, but you are not sure which specific job titles are linked to this field, or you want to know what kind of qualifications and skills are needed to be a psychologist at a hospital.

You can use this information to make career goals and think strategically about how you can develop experiences that will help you meet more of the selection criteria in the future.

Job search sites include

- PNet (http://www.pnet.co.za)
- Careerjunction (http://www.careerjunction.co.za)
- Careers24 (http://www.careers24.com/)
- Indeed (http://www.indeed.co.za)
Activity

Use the Indeed website ([http://www.indeed.co.za](http://www.indeed.co.za)) to search for job advertisements that mention the words “psychology graduate” or “psychology degree” or “social science degree”. Write down the job titles that you find.

**Example list of job titles related to a bachelor’s degree in psychology**

- User experience designer
- Join a Graduate Development Programme/ Graduate trainee
- Recruitment consultant
- Researcher
- Community engagement officer

**Your list of job titles related to a bachelor’s degree in psychology**
Activity

Use one of the websites above to search for “psychology”. Read at least three advertisements and note the information in the tables below.

Example (used indeed.co.za)

<table>
<thead>
<tr>
<th>Job title</th>
<th>Report writer</th>
</tr>
</thead>
<tbody>
<tr>
<td>Salary</td>

4 Psychology career websites/ web pages

Many specific psychology career websites can help you to identify job titles related to different areas in psychology. Examples of these pages include:

- Careers in Applied Psychology  
  [http://www.psychology.uct.ac.za/what-can-i-do-my-psychology-degree](http://www.psychology.uct.ac.za/what-can-i-do-my-psychology-degree)
- American Psychological Association Careers in Psychology  
- American Psychological Association Career Guides  
- British Psychological Society: Your journey into psychology  
- Australian Psychological Society: Careers in Psychology  
- Verywellmind.com Careers in Psychology  
- Careers in Psychology  
  [http://careersinpsychology.org/psychology-careers](http://careersinpsychology.org/psychology-careers)
Activity

After visiting the above sites and reading through the information, write down the job
titles mentioned on these sites in the table below.

<table>
<thead>
<tr>
<th>Job titles related to a degree in psychology</th>
</tr>
</thead>
</table>

5 LinkedIn

If you have not done so already, start building your network on LinkedIn
(http://www.linkedin.com) today!

Register for a free account and start connecting with your network online. Join
groups relevant to your career field so that you could participate in discussions, ask
questions, provide answers about specific topics, and search for people,
organisations and jobs in your field of interest. Do research about companies and
employees to help you identify opportunities. To learn more about using LinkedIn

Activity

1. Go to www.linkedin.com and sign in to your LinkedIn account. If you do not
have an account yet, then create one.

2. Make sure that you have captured your current or previous studies at Unisa
on your LinkedIn profile.

3. Once you are signed in, go to the University of South Africa page at
https://www.linkedin.com/school/12049/.

4. Click on “Alumni”.
5. You will now be presented with a page with Headings and graphs beneath the headings (Where they live, Where they work).

6. Click on the “Next >” link to go to the next set of headings (What they do and What they studied).

7. Click on “+Add” next to the heading “What they studied”
8. Start to type “psychology” in the search box. You will notice that you are provided with suggestions for study fields.

9. Choose one of those options that you would want to explore.

10. You will notice that the graphs for the different headings adjust. You have now filtered the information to contain information about Unisa graduates for a specific field of study.

11. You can now see how many graduates in these fields are on LinkedIn, where they work, what they do, what they’re skilled at, etc.

12. You are also able to view the profiles of alumni who meet the criteria you searched for. For example, you can filter your search results to those alumni who indicated that they studied psychology, and work at Unisa.

13. Make some notes about the interesting things you find below.

Your notes about what you find on LinkedIn
6 Talk to others (informational interviewing)

Once you have done some research about specific options, your next step is to talk to individuals in the type of job/industry that you are interested in. The goal of these conversations is to explore your career options, to expand your network, to build confidence, to access information and to identify your own strengths and areas of development. For example, you read an article about a new programme for addiction treatment and you feel curious about how the researchers went about evaluating the programme. You could contact one of the authors of the article to ask if they would be willing to share how they went about gaining access to the information they needed for their evaluation. Before you interview someone, do research about what you would want to discuss with them – you could ask this person to “fill in the gaps” for you. Start with people you already know: friends, family, neighbours, colleagues, lecturers, tutors and fellow students. Use online social networks such as LinkedIn to identify potential individuals. For more information on how to go about this, and suggestions for questions that you might want to ask, visit http://bit.ly/2LX7qp3. Also watch this video to learn more: The Dos and Don’ts of Informational Interviews: http://youtu.be/ixbhtm8l0sl.

Keep track of:

- the information you have gathered,
- how you make sense of the information,
- questions you still have, and
- ways you think you will be able to get answers to these questions.
A current student, Ms. Nomalanga Mnisi, shares her experience of conducting informational interviews:

How did you prepare for the interviews?

I started by reflecting on my career vision, as well as making notes of how I think my vision is related to the organisation I will contact for interviews, as well as the possible career fields within the company that are related to my studies and career vision.

I did research to help me understand more about the organisation, for example, the different divisions, where they are, what their main business is, and the kind of jobs available. This helped me to know which questions I need to ask so that I could clarify uncertainties.

I also wrote an introduction letter (who I am, previous and current qualifications, why I am interested or what I know about the organisation, the purpose of the information interview and how it will contribute to my career development and also careers that I am interested in within the organisation).

I made a list of aspects I am curious about, including in which department is my qualification in demand within the organisation, which career positions I can be considered for with my qualifications?; different career titles within the company related to my studies?; other requirements for those positions, e.g. skills, drivers licence, physical health etc.; how to structure my CV and cover letter; what to include when I apply for positions in the organisation?; information about internships, learnerships or volunteering programmes that I can apply for to enhance my skills.

What did you do before the interview?

I sent an email confirming my appointment with keywords that I wanted the interview to cover and specified that among others those are topics I wanted to discuss with them. Both gave me feedback that my email also helped them to prepare for the interview.
What did you gain from the interviews?

The two individuals I spoke to helped me to understand what I needed to ask during my next interviews in specific sections.

Activity

Write down the names of people you know who may work in the fields you are interested in. For instance, do any of your parents' friends work in any of the fields you are considering? In addition, write down the names of other people who you think could give you information about any careers you are considering.

<table>
<thead>
<tr>
<th>People who work in my preferred career</th>
<th>People who can give me information about potential career choices</th>
</tr>
</thead>
<tbody>
<tr>
<td>Brother's friend</td>
<td>University tutor</td>
</tr>
</tbody>
</table>

You may have identified a lot more people than you thought! Imagine how much information you can gather about the career you are interested in just by talking to these people. Each person will give you fresh insights, opinions, and valuable information about the careers you are considering, whether they are currently working in that field or are only remotely related to or associated with it.
Attending a careers fair event gives you the opportunity to speak to people from different industries. You may be studying a qualification that does not seem to have a direct link to the exhibitors or the presenters, but they have one thing in common: they employ people, who work in organisations, who do business with all kinds of suppliers and services. Somewhere in this value chain, your qualification will find a place to fit – either as a customer or as an employer or employee.

**Preparation**
- Think about what you will wear.
- Practice your handshake and introduction - how will you introduce yourself to recruiters?
- Update your CV and prepare to answer questions about yourself, your career and your studies.
- Do research about the participating organisations (start with the organisation's website).
- Prepare questions that you would want to ask recruiters - use your research about an organisation to inform your questions (for example, “What kind of person are you seeking for this position?” and “What particular skills do you value most?”).

**During**
- Make an effort to speak to all the exhibitors and presenters and keep a note of who they are and what their companies do – remember to introduce yourself.
- Speak clearly and confidently – it may be noisy, so remember to speak up if necessary.
- Be ready to take notes: Carry a notebook and pen with you, or do it on your cell phone/tablet.
- Network with other students at the Careers Fair (but not at the expense of talking to employers!)
- Don’t ask about: Information you could have easily learned on the employer’s website or salary and benefits.

**After**
- Make notes about the various people you spoke to and the information you would want to follow up.
Connect with company representatives that you met online (for example, on LinkedIn)

Reflect on your experience: How did you use this opportunity? Could you link your skills and qualification to what was offered at the Fair?

The annual Unisa Careers Fair usually takes place in July and August at various venues. Go to http://www.unisa.ac.za/counselling for more information.

8 Experience studying psychology

Explore what psychology is by watching and listening to online lectures and reading free open textbooks on a variety of topics in psychology such as introductory psychology, social psychology, human emotion, history of psychology, clinical psychology, brain structure and its origins, neuroscience and behaviour, depression and more. These resources will enhance your understanding of psychology and the various opportunities related to this field.

Search for psychology courses and open textbooks on these sites:

- Open University (Visit the site at http://www.open.ac.uk/openlearn/ and type “psychology” in the search box to find psychology-related courses.
- Coursera.org (http://www.coursera.org/)
- Udemy (http://www.udemy.com/)
- Saylor Academy (http://www.saylor.org/books/)
- Khan Academy (for statistics-related courses) (http://www.khanacademy.org/)
- MIT OpenCourseware (http://ocw.mit.edu/courses/brain-and-cognitive-sciences/)
- Open Culture (http://www.openculture.com/freeonlinecourses)
- iTunes university (http://www.apple.com/education/itunes-u/)
- YouTube education (http://www.youtube.com/education?b=400)
- FreeVideoLectures (http://freevideolectures.com/Subject/Psychology)
Professional psychology in South Africa

Individuals can register with the Health Professions Council of South Africa in one of the following registration categories:

- Registered counsellor
- Psychometrist
- Clinical psychologist
- Counselling psychologist
- Educational psychologist
- Research psychologist
- Industrial psychologist

Other important information on the Board for Psychology website:

- A list of accredited universities in South Africa in terms of training in psychology.
- Rules and Regulations of the Board
  (http://www.hpcsa.co.za/PBPsychology/Rules)
- National Board examination information (including exam results, dates for application reading material)
  (http://www.hpcsa.co.za/PBPsychology/Examinations)
- Information about internships and the list of approved internship organisations
  (http://www.hpcsa.co.za/PBPsychology/Education)

Registered counsellor

The role of the registered counsellor is to provide psychological screening services and short-term psychological interventions to enable individuals to function more effectively, Professor H G Pretorius (2012) summarises the role of the counsellor as follows:

“to make preventative and developmental counselling services accessible and affordable to all; to firstly act as "emotional paramedics" in cases of trauma; to intervene appropriately, and to refer when and where necessary; to act as a resource in communities and to promote health in a socio-cultural appropriate manner; to design preventative and developmental programmes, to implement them in the widest possible contexts, and to monitor their effectiveness”.

Where do they work?

Community-based settings such as schools, non-government organisations, prisons, children’s homes; universities as counsellors and lecturers; organisations as HR practitioners and recruitment consultants.

Professional training route: Registered counsellor

Training at Unisa

Unisa is in the process of restructuring the BPysch equivalence programme and will be in a position to offer it again, after attending to HPCSA requirements. Keep in mind that as with the previous BPysch equivalence programme there will be a selection process and only a limited number of students will be accommodated annually. There is also no guarantee that you would be accepted in the programme automatically. The undergraduate and Honours degrees in Psychology are accredited and the options of doing a Master’s Degree in Clinical Psychology or Masters by dissertation remain open after the Honours degree in Psychology.

Psychometrist

Psychometrists perform psychological assessment and use psychological assessment data. Psychometrists are permitted to select, administer, score, and interpret psychological tests, write and sign reports and give feedback to clients independently. They need mentoring by or refer to a registered psychologist only when they find it necessary within their prescribed scope of practice as specified by the Board. When it comes to reporting the results, the psychologist needs to take final responsibility for the contents of the report, but the psychometrist may contribute to the content and co-sign the report. Psychometrists are not permitted to use certain personality measures (for example, TAT, CAT, Rorschach); specialist neuropsychological measures; measures that are used for the diagnosis of psychopathology (for example, MMPI-2).

Where do they work?

The psychometrist may be part of a psychological practice or employed by private companies, industry, or institutions such as government departments or non-governmental organisations (NGOs). The psychometrist, who from 2006 only registers at the level of independent practice, is allowed to practice independently
but must adhere to the scope of practice specifications by the Board, and not execute psychological acts reserved for counsellors and registered psychologists.

**Professional training route: Psychometry**

![Diagram](image)

**Training at Unisa**

Unisa is in the process of restructuring the BPsych equivalence programme and will be in a position to offer it again after attending to Unisa management and HPCSA requirements. Keep in mind that as with the previous BPsych equivalence programme there will be a selection process and only a limited number of students can be accommodated annually and no guarantee that you would be accepted in the programme automatically. The undergraduate and Honours degrees in Industrial and Organisational Psychology are accredited and the options of doing a Master’s Degree in Industrial and Organisational Psychology and Masters by dissertation still remain open after the Honours degree. Utilise the information and activities in this brochure to help you identify other career opportunities.

View a list of accredited universities in South Africa in terms of training in psychometry on the HPCSA website at
The various institutions will be able to advise whether psychology or industrial psychology at undergraduate level and/or Honours level is required.

**Clinical psychology**

A clinical psychologist renders a diagnostic and therapeutic service, often in association with medical, paramedical and other professionals, to patients or clients experiencing mental and/or emotional distress. The focus is on medium and long-term interventions at the secondary and tertiary curative and/or preventative levels.

**Where do they work?**

A clinical psychologist can be self-employed, part of a psychological practice or employed by organisations in the private or public sectors. Many psychologists are employed by mental health service institutions, hospitals, schools and counselling centres. Opportunities are also available at tertiary institutions, non-governmental organisations (NGOs), community-based organisations (CBOs) and government departments. The psychologist can act as consultant to a variety of institutions. Psychologists are also increasingly drawn to health institutions, such as sport training institutes. Some perform expert witness duties in court, and some specialise in defined fields, such as neuropsychology or bereavement. Others follow the academic route as lecturers at Higher Education institutions and focus on research, teaching and community engagement.
Professional training route: Clinical psychology

1. Undergraduate
   Complete Bachelor's degree with Psychology as major (for example: Bachelor of Arts, Bachelor of Science, Bachelor of Business Administration, Bachelor of Social Work). The minimum admission requirement to the Honours degree in Psychology at Unisa is an average of 60% for the major in Psychology.

2. Honours degree
   Complete Honours degree in Psychology.

3. Master's degree
   Apply for selection on completion of the Honours degree. Applications close on different dates – contact the University if you wish to apply to at the beginning of the year to make sure. At Unisa, applications close at the end of June each year, with selection in August/September in Pretoria. The Master's programme for Clinical Psychology is only available as a full-time on-campus programme. Only a few students (0-10) are selected annually at each institution.

OR

1. Undergraduate
   Complete Bachelor of Psychology (4 years). The practicum is included as part of the BPsych programme.

Professional training route: Clinical psychology

The application form for the Unisa Master of Arts in Clinical Psychology is available here: https://www.unisa.ac.za/sites/corporate/default/Apply-for-admission/Master%27s-&-doctoral-degrees/Qualifications/Selection-degrees.

Forensic psychology

Clinical-forensic psychologists are clinical psychologists who specialise in the assessment and/or treatment of persons who, in some way, are involved in the legal process or legal system. According to the forensic psychologists’ scope of practice in South Africa, these practitioners may

- conduct psychological assessments, diagnoses, and interventions;
• refer clients to appropriate professionals for further assessment or intervention;
• provide therapeutic interventions; advise on the development of policies, based on forensic psychological theory and research;
• design, manage, and evaluate forensic psychology-based programmes, and interventions;
• design, manage, and conduct research; report on, and supervise research, in forensic psychology
• train, supervise students, interns, and other registered psychology practitioners in forensic psychology; and
• provide expert evidence and/or opinions.

**Professional training route**

See route for clinical psychology. There is no specialised training programme at Master’s programme for this specialisation. Practitioners who specialise in this field first train as clinical psychologists.

**Neuropsychology**

Neuropsychologists evaluate psychological and behavioural disturbances associated with central nervous system dysfunction. According to the neuropsychologists’ scope of practice in South Africa, these practitioners may:

• assess, diagnose and intervene in psychological disorders of people experiencing neuropathology;
• diagnose and evaluate psychological disorders caused by neurological conditions; and
• treat and rehabilitate psychological disorders of people suffering from central nervous system dysfunction.

Neuropsychologists can also be involved with policy development, perform research related to neuropsychology, train and supervise other registered practitioners in the field of neuropsychology, and provide expert opinion and/or evidence. Visit the South African Clinical Neuropsychological Association (SACNA) webpage (http://www.sacna.co.za) for more information about this field.

Professional training route

See route for clinical psychology. There is no specialised training programme at Master’s programme for this specialisation. Practitioners who specialise in this field first train as clinical psychologists.

Research psychology

Research psychology is a specialised sub-discipline in Psychology that focuses on applied research across diverse sectors. A research psychologist investigates various societal and human issues in order to generate and disseminate psychological knowledge for the purpose of understanding and dealing effectively with these issues. Research psychologists are also concerned with evaluating the effectiveness of interventions. This specialisation is suitable for persons who are interested in psychology as the scientific study of human behaviour, rather than in the applied field of therapy. Professional training in research psychology offers an exciting opportunity to obtain skills and competencies to meet the rapidly changing needs of our fast-moving information society. A master’s degree in research psychology also serves as the basis for PhD studies and a career in academia.

On completion of an HPCSA approved research psychology Master’s degree, one has the opportunity to pursue professional registration with the HPCSA as a research psychologist.

Identify the Universities that currently offer accredited research programs in the HPCSA Accredited Institutions document:

**Where do they work?**

Masters degrees that specialise in research psychology focus on developing practical and applied research skills in quantitative, qualitative and mixed, or multi-method, research. Such degrees equip graduates with key skills to work across a range of research environments, including but not limited to, science councils, government, policy research units, NGOs, advocacy organisations, independent research consultancy, market research, public health, education, and personnel development. Research psychologists may be employed as researchers and consultants in the general area of psychological and social science research and consultation. Possible employers include market research companies; research organisations such as the Human Science Research Council; government departments; South African Police Services; media companies; financial institutions; management consulting companies; nongovernmental organisations; community-based organisations and mining companies. Self-employment is possible as a research consultant.

Having equipped students with key research skills, a Master’s degree in Research Psychology opens many doors for graduates. A table follows with an indication of some of the sectors graduates can find internships and/or employment.

As a Masters graduate within this field, one also has the opportunity to pursue a career in various corporations within research & development (R&D) or marketing departments. To list a few examples of such corporations, one would be able to work in the banking sector, technology and communications sector, and FMCG sector.

If you wish to pursue HPCSA registration, you have to complete an internship at an HPCSA accredited internship site, following which you would write the Professional Board for Psychology examination. A list of HPCSA accredited internship sites is available on the HPCSA website at http://www.hpcsa.co.za/Uploads/editor/UserFiles/downloads/psych/UPDATED_FOR_M_77_2016.pdf. Further information regarding professional registration is available on the HPCSA website at http://www.hpcsa.co.za/PBPsychology/Registration.

Should you not wish to complete your internship at one of the above pre-approved internship sites, you have the opportunity to complete an individualised internship at a non-accredited site of your choice. More information regarding this process and the internship site requirements is available on the HPCSA website at http://www.hpcsa.co.za/PBPsychology/Education (form 107 and checklist for research psychology internship applications).
Thank you to PsySSA, the DRM (Division for Research and Methodology) and the PsySSA Student Division for information about the opportunities related to research psychology. To join PsySSA, the DRM, and/or the Student Division, for more information, as well as educational and career-related support, visit http://www.psyssa.com.

Professional training route: Research psychology

Training at Unisa

Unisa is in the process of restructuring the Master’s degree to be accredited with the HPCSA for research psychology. View a list of accredited universities in South Africa in terms of training in psychometry on the HPCSA website at https://www.hpcsa.co.za/Uploads/editor/UserFiles/downloads/psych/ACCREDITED_
The various institutions will be able to advise regarding the requirements for admission to a Master’s degree.

**Industrial Psychology**

Industrial and organisational psychologists study the organisation/employee interface and subsequently apply psychological principles to maximise reciprocal satisfaction and productivity in the work environment. Industrial and organisational psychology is the scientific study of human behaviour in the workplace. It involves the interaction of individual, group, organisation and work processes to influence behaviour and promote mental health and productivity.

**Where do they work?**

Possible employers include private and public companies; consultants to trade associations or to retailers or manufacturers; university lecturers who do research in the field; private consultants; large organisations such as mining houses, insurance companies, and government departments. Graduates can be appointed as researchers by the following institutions: universities; the Council for Scientific and Industrial Research (CSIR); the Human Sciences Research Council (HSRC) and the Chamber of Mines of SA; and other organisations, for example marketing research houses that use psychologists to execute research with regard to consumer behaviour and profiles. Industrial Psychologists are also employed or self-employed as executive coaches, organisational development practitioners, labour relations practitioners and employee wellness practitioners.
South African Board for People Practices (SABPP)

The South African Board for People Practices (SABPP) is approved by the South African Qualifications Authority (SAQA) as the Education and Training Quality Assurance body (ETQA) for some crucial human resources qualifications in South Africa. The Board offers various levels of professional and pre-professional registration from level 1 (HR technician) to level 5 (master HR practitioner). Please see the Board's website at [http://www.sabpp.co.za/](http://www.sabpp.co.za/) for further information about qualifications needed.

Professional training route: Industrial psychology

More information about the Unisa MCom in Industrial and Organisational Psychology (Course work) (Selection degree) is available here:
Educational Psychology

Educational psychologists are involved in counselling clients in educational contexts. Their focus is on guiding and counselling clients with a view to alleviating emotional problems, making subject and career choices, assisting learners with barriers to learning, and facilitating the school admission process. Some conduct research on topics related to the learning of reading, writing, mathematics, and science. Others develop new methods of instruction including designing computer software. Others train teachers and investigate factors that affect teachers' performance and morale.

School psychology is related to educational psychology. The primary responsibility of a school psychologist/ counsellor is to help learners, teachers, and parents with career and subject choices, school adjustment and personal matters.

Where do they work?

Most educational psychologists work in educational institutions (schools or universities) or in private practice. Opportunities also exist in community-based settings such as non-government organisations and children’s homes, at universities as counsellors and lecturers, and at organisations as training practitioners. Educational psychologists can also work as researchers for research organisations or government.
Training at Unisa

Kindly take note that the Master’s degree related to educational psychology is currently under review and that it will not be available until further notice. Download the List of Accredited Universities here: https://www.hpcsa.co.za/Uploads/editor/UserFiles/downloads/psych/ACCREDITED_UNIVERSITIES_IN_SOUTH_AFRICA_2017-11-10.pdf. The institution(s) you wish to apply can provide you with information about the requirements to apply for a Master’s degree related to educational psychology.

View a list of accredited universities in South Africa in terms of training in psychometry on the HPCSA website at https://www.hpcsa.co.za/Uploads/editor/UserFiles/downloads/psych/ACCREDITED_UNIVERSITIES_IN_SOUTH_AFRICA_2017-11-10.pdf. The various institutions will be able to advise whether psychology or industrial psychology at undergraduate level and/or Honours level is required.
Counselling psychology

Counselling psychologists assess, diagnose, and intervene in clients dealing with life challenges, and developmental problems to optimise psychological wellbeing; assess cognitive, personality, emotional and neuropsychological functions in relation to life challenges and developmental problems; and assess developmental processes (e.g. career choice), and adjustment (Scope of Practice of Counselling Psychologists). In addition, counselling psychologists may identify and refer psychopathology; advise on policy; conduct research; train and supervise other psychologists, and provide expert opinions.

Where do they work?

Private practice; Department of Health; Universities and universities of technology; in organisations with wellness services; community-based organisations; and research organisations.
Training at Unisa

Unisa does not offer training at Master’s level for Counselling Psychology.

Other psychology specialisation areas

Cognitive psychology

Cognitive psychology attempts to understand the nature of human thought processes. They study how people learn, understand, remember, and make decisions as a result of information they derive from current circumstances, their
existing memory, and the consequences of their own actions. Most cognitive psychologists are engaged in basic or applied research at universities and research institutions. Self-employment as an industrial consultant or human factors specialist is also possible.

**Social psychology**

Social psychologists study how people interact with each other and are affected by their social environments. They study individuals as well as groups, observable behaviours, and private thoughts. Employment opportunities exist at tertiary institutions. Many social psychologists are employed in the private sector as consultants, researchers, marketing directors, managers, political strategists, technology designers and so on. Social psychologists also work in government and non-profit organisations, designing and evaluating policy and programmes in education, conflict resolution, and environmental protection.

**Sport psychology**

Sport and exercise psychology is the scientific study of the psychological factors that are associated with participation and performance in sport, exercise, and other types of physical activity. Athletes, coaches and parents are taught healthy and effective methods of building mental toughness, coping with pressure, and developing effective self-management practices within the context of competitive sport. Sport psychology is currently not a separate registration category of the Health Professions Council of South Africa (HPCSA). Practitioners in this field normally train as clinical and counselling psychologists and also complete further training in sport psychology and/or related fields such as Biokinetics and Sport Science.

Unisa offers an Honours level module in Sport Psychology as part of the BA Honours in Psychology (Applied Psychology for Professional Contexts), as well as a short learning programme (Course in Sport Psychology) through the Centre for Continuing Education.
Further online resources related to sport psychology in South Africa:

- University of Pretoria Sport Science and Medical Unit (http://www.up.ac.za/hpc-sport-science-medical)
- University of Cape Town Sport Science Institute of South Africa (https://www.ssisa.com/)
- PerformingMind (http://www.performingmind.co.za/Sports-Psychology/studying-sport-psychology.html)
- Search for these journal articles in the Unisa Library catalogue:

**Applied experimental and engineering psychology**

This field is at the intersection of psychology and technology. It suits people with a creative, exploring mind, an inclination toward research and practice, who work well in a team setting with other professionals, and who have an abiding interest in psychology. Work settings range from teaching to laboratory to the industrial design team.

Applied experimental and engineering psychology is increasingly employed in the design and evaluation of medical instrumentation and processes, as well as and forensic work involving product and workplace safety.
Behavioural science

Behavioural economics

Art therapy

There is no formalised registration category with the Health Professions Council of South Africa for art therapy. In terms of professional training, there would not be one best route to take, since clinical, counselling and educational psychologists could possibly use forms of art therapy in their work. While you are busy with your undergraduate psychology modules that you need to complete to get to your chosen postgraduate programme, you could start making contact with practitioners in this area to find out more about their background and possibly get more practical recommendations.

Art Therapy (http://www.arttherapy.co.za/) offers a number of workshops and courses in this field. Their website also contains some useful information about the field. The Art Therapy Centre also offers training programmes and descriptions of their projects. You could consider becoming involved with art therapy on a volunteer basis while busy with your formal studies.

Try Greater Good SA (http://www.greatergoodsa.co.za/) to look for art-related volunteer opportunities in your area. This would also be a great way for you to network with other professionals and find out more about your area of interest.

Music therapy

The music therapist uses music to restore, maintain and improve mental and physical health. The Department of Music, University of Pretoria, offers a Masters in Music Therapy (http://www.up.ac.za/en/music/article/44462/training-in-music-therapy).
Further online resources related to music therapy in South Africa:

- South African Music Therapy Association ([http://www.samta.co.za/](http://www.samta.co.za/))
- South African Network for Arts Therapies Organisation (SANATO) ([http://sanato.co.za/](http://sanato.co.za/))

**Social Work**

The Unisa Department of Social Work offers the following definition of social work: “Social work focuses on the interaction between individuals, groups and communities and their social environments. It includes the following: the facilitation of people to address their problems stemming from their social interactions; empowering people to promote their own welfare and to develop their own abilities, resources and potential. The principles of human rights and social justice are fundamental to social work”.

As with all other “helping” professions, prospective social workers have to be interested in individuals and their stories, as well as possess excellent interpersonal communication skills. Social workers work within a variety of contexts, including non-governmental organisations (NGOs); community-based organisations (CBOs); voluntary and private and religious welfare organisations; government sectors (local, provincial and national); private business, clinics and hospitals. Social workers work closely with psychologists, counsellors, health care professionals, legal advisors and lawyers.

Psychology can be taken as a major for the BA Social Work degree. This means that once you are qualified as a social worker, you could continue your studies in psychology to become a registered counsellor and/ or psychologist, in addition to being a registered social worker.
Play therapy

Play therapy uses a variety of techniques that give traumatised children the opportunity to communicate feelings, emotions, experiences and behaviour through play (http://gestaltplaytherapy.co.za).

Where to apply?

- University of Pretoria offers a Master’s in Social Work with specialisation in Play-based intervention

Psychiatry

According to the South African Society of Psychiatrists (http://www.sasop.co.za), a psychiatrist is “a medical doctor, who has specialized in the field of Psychiatry. To be able to practice, a Psychiatrist must be registered with the Health Professions Council of South Africa (HPCSA), as a Psychiatrist, under the specialist register”.

Psychiatrists have medical training and can examine, diagnose and treat patients with medical illness that can lead to mental problems. Psychiatrists are also trained in psychotherapy and therefore are able to treat patients through psychotherapeutic interventions. Psychiatrists can prescribe medication and psychotherapy to treat mental illness.

A Psychiatrist must first complete a medical degree. This is usually indicated as a MBCHB or MBBCH degree. This qualification takes six years to complete. An internship follows that takes another year, and South African doctors are then required to complete one year of community service.

After this, a doctor could specialise and become a “specialist”. It takes another four years of study to gain the qualification to practice as a Psychiatrist. This qualification is usually indicated as a MEd Psych or a FF Psych or FC Psych.
Learn more about psychiatry on the following websites:

- American Psychiatric Association (http://www.psych.org)

Psychological Society of South Africa

About PsySSA

The Psychological Society of South Africa (PsySSA) advances South African psychology as a science and profession of global stature and promotes psychological praxis as relevant, proactive and responsive to societal needs and well-being. PsySSA has dedicated its work to the construction and development of post-apartheid South African Society. The Society is also involved in ongoing negotiations with government, other legislative bodies, and the private and civil
Society sectors to contribute to issues affecting South Africa’s rapidly changing environment. As the representative body of psychologists in the country, the Society lobbies for members and advocates for psychology as a vital science and relevant practice. The Society provides a valuable networking facility for all members. PsySSA publishes the quarterly leading psychology journal in Africa, the South African Journal of Psychology as well as PsyTalk.

PsySSA has the following divisions that members can belong to:

- Business Psychology and World of Work Forum (BWWF)
- Community & Social Psychology Division (CaSP)
- Society for Educational Psychology of South Africa (SEPSA)
- Division for Research and Methodology (DRM)
- Division of Neuropsychology and Forensic Psychology (DNFP)
- Division of Registered Counsellors and Psychometrists (RCP)
- Forum of African Psychology (FAP)
- Psychology in Public Service (PiPS)
- Sexuality and Gender Division (SGD)
- South African Society of Clinical Hypnosis (SASCH)
- Student Division
- The South African Association for Counselling Psychology (SAACP)
- The South African Society for Clinical Psychology (SASCP)
- Trauma and Violence Division (TVD)

For more information about PsySSA and becoming a member, visit the website at http://www.psyssa.com/.
PsSsA Student Division

You can join PsSsA as a student member. The Student Division focuses on student matters and is interested in being a voice for psychology students. Goals of the Student Division include: researching different concerns regarding psychology students (survey and round tables); exposing psychology students to the academic and professional discipline of psychology (i.e. PsSsA Conference); creating opportunities for psychology students to engage in mentorship opportunities; assisting the community through community projects (giving student volunteer experience); connecting students to professionals and researchers in their respective fields of interest; addressing the mental health stigma in South Africa among the youth; and assisting psychology students to connect with professionals to gain skills to produce publishable material.
Your education plan

Which degree should you start with?

Theoretically, it does not matter which degree you complete, as long as you are including psychology as your major subject (in other words, you include it on first, second and third level). Your choice of which first degree to complete would be informed by your interests and career vision and for which kind of opportunities you would want to prepare yourself for. For example, even if you say you are interested in clinical psychology, these individuals work in a variety of contexts and have different backgrounds. For example, someone interested in neuropsychology and forensic psychology may find it beneficial to have a science background (for example, a BSc in Psychology and Physiology), whereas someone interested in community psychology, may find it helpful to have a development studies (BA General) or social work (Bachelor of Social Work) background.

We realise that it may be confusing and there is not really a guarantee as to which field you will eventually work in, as your experiences while you are studying in terms of working and volunteering will shape your career identity. As you progress with your studies and expand your network and knowledge of opportunities related to psychology, you will be able to identify more options to consider.

Psychology or industrial and organisational psychology can be completed as a major for the following degrees:
College of Human Sciences

General degree

<table>
<thead>
<tr>
<th>Programme</th>
<th>Number of majors</th>
<th>Further studies</th>
</tr>
</thead>
<tbody>
<tr>
<td>BA General</td>
<td>Two major subjects. You will select Psychology as one major.</td>
<td>Honours in either major subject (minimum admission requirement: average of at least 60% for your major subject)</td>
</tr>
</tbody>

</table>

e.g. Bachelor of Science
Majors: Psychology
Other subjects: Computer Science
NSC; Maths HG D
Will enable me to combine my interest in psychology and computers
I am not sure how this degree will help me to be a registered research psychologist – is it enough?

1

2

3

4
Take a few minutes and write down short answers to the following questions. Be honest with yourself, and write down what you really feel.

<table>
<thead>
<tr>
<th>Question</th>
<th>Answer</th>
</tr>
</thead>
<tbody>
<tr>
<td>Which qualification(s) have you identified that you would want to explore further?</td>
<td></td>
</tr>
<tr>
<td>How long do you anticipate studying?</td>
<td></td>
</tr>
<tr>
<td>How many modules will you need to take per semester to finish your undergraduate degree?</td>
<td></td>
</tr>
<tr>
<td>What do you anticipate will be the most difficult part of completing your degree?</td>
<td></td>
</tr>
<tr>
<td>Are you confident you will be able to overcome any possible challenges related to your studies?</td>
<td></td>
</tr>
</tbody>
</table>

Were you able to answer these questions? How confident do you feel about your plan? These are important questions to think about since students who have a clear plan and who are prepared to overcome possible obstacles that may arise along the way, are much more likely to succeed at Unisa. In other words, just thinking in a positive way about your future can help you get to where you want to be.
Prepare for career opportunities

Many people believe that a degree will lead directly to a career specifically related to the major(s)/ specialisations for that degree. The fact is that degrees do lead to careers, but that the relationship between the major(s)/ specialisation you choose and the career you build for yourself is complex. Many graduates follow careers that are seemingly not related to their chosen major(s)/ specialisations. Various career management techniques will assist you with managing your career in psychology:

1. Develop and reflect on your transferable skills
2. Start with a career portfolio
3. Volunteer work
4. Enhance your employability

Develop your skills

Develop and reflect on your transferable skills

Your degree will equip you with subject-specific knowledge and a number of work-related skills (transferable skills), for example the ability to learn fast in new situations, to work independently, and to analyse, evaluate and interpret data. You should be able to identify and articulate the skills that you feel you are gaining through your studies. While you are busy with your studies, you need to reflect continuously on how you could apply the skills that you are learning to contribute to
your professional development and who will be able to benefit from what you already know.

Start with a career portfolio

Your career management portfolio could help you keep track of the information that you need to gather in order to manage your career. It could include information about yourself, about job opportunities, occupational information and about the different fields in psychology. Learn more about compiling a career portfolio here: [http://bit.ly/2WaPes7](http://bit.ly/2WaPes7).

Work experience for psychology students

Becoming a professional psychologist is very competitive. Each university that trains psychologists selects approximately 8-14 students annually for the various training programmes. It is therefore important for you to consider how you will increase your chances of being selected for a postgraduate training programme.
Volunteer work

As a volunteer, your studies in Psychology will come alive and you will be enriched and in a position to build up an important network of people who could comment on your professional abilities. You may be wondering how volunteering is related to your studies and your career. We would encourage responsible volunteering where the organisation and community that you are supporting benefit. You also have the opportunity to apply and further develop your skills and knowledge as a student to support the community. Your volunteer work links to your career vision and planning: before you volunteer, think about where you would want to invest your effort.

Volunteering will help you to:

- figure out whether a specific field of work is for you or not;
- find out information about a specific field;
- connect with others and maintaining relationships;
- network with others in your field of interest.

Some questions to think about:

- Which organisations or community would benefit from my skills and knowledge?
- How would this organisation or community contribute to my career vision?
- What conduct is expected of a professional in this organisation and in my future career?
- What are you hoping to gain from your volunteer activities?

Your volunteer work could lead to other opportunities, so it is important to treat it professionally: keep to your commitment, communicate when you cannot volunteer and update your portfolio with examples of what you have learnt and achieved. As a volunteer, you are already working as a professional – you need to conduct yourself as you would conduct yourself in a work environment. As you are volunteering, you are building your reputation (your “brand”): you would not want to build a reputation as an exploiter or as an unreliable worker.
Your volunteer environment will help you to develop what is valued in professional environments. This includes punctuality, problem-solving and effective communication. In this sense, volunteering contributes to your development as a unique graduate: one who has subject-specific knowledge and an understanding of professional workplace behaviour. The one thing to remember about volunteering is that your conduct needs to be accountable and ethical. Consider that you are contributing to the community and at the same time you are building your skill sets for the workplace – you need to balance self-interest with that which may benefit others. It is important that your work within the community be done with the utmost respect.

Identify volunteer opportunities in your area through conversations with members of your community. The GreaterGoodSA website (http://www.greatergoodsa.co.za/) will further help you to identify volunteer opportunities in your community that are related to your interests. Make a list of the organisations that you would want to contact about exploring volunteer opportunities:

Volunteers normally work under the supervision of psychologists and social workers. Organisations making use of volunteer counsellors include Lifeline (counselling); SADAG (South African Depression and Anxiety Group); Nicro, Childline and Rape Crisis (abused women and children); Alcoholics Anonymous (addictions); Hospice Association of SA and St Luke’s Hospice (death and dying); FAMSA and ACVV (relationships/family counselling); ATICC and AIDS Helpline (HIV/AIDS) and Triangle Health Care Project (sexuality).

Note that being trained as a volunteer counsellor, without professional psychological qualifications, does not qualify you to be a professional counsellor or psychologist or to practise independently. However, volunteering helps you to contribute to a community and learn valuable skills. Volunteering will allow you to clarify your interests in terms of helping others and expand and strengthen your network.
Check which volunteer organisations are active in your community. The Department of Social Development has a complete list of non-profit organisations in each province available on their website at http://www.dsd.gov.za/npo.

Unisa’s Directorate: Counselling and Career Development runs a Student Mentor Programme that provides senior Unisa students with an opportunity to be mentored in terms of their graduateness skills. In turn, students are empowered to provide support to others. Visit the website at http://bit.ly/2MQBnpE for more information.

Activity

Identify volunteer work activity

Make a list of the organisations that you would want to contact about exploring volunteer opportunities.

What are you hoping to gain from your volunteer experience?

What can you contribute to an organisation?
Enhance your employability

Your employability refers to your ability to gain initial employment, maintain employment, and obtain new employment if required. In simple terms, employability is about being capable of getting and keeping fulfilling work. There are many aspects related to maximising your employability, including managing your personal brand, job-searching skills, networking, writing a CV, writing a cover letter, include networking, CV-writing, cover letter writing and how to manage job interviews.

Why is your employability important?

Today’s careers are not what they used to be: Lifetime employment is a thing of the past: It is not unusual for an individual to hold about six different occupations during their careers, each with several jobs. The reasons for this are technological advances, globalisation, economic shifts and changing social norms. Careers are boundaryless: your career can cut across different industries and companies. Instead of seeing your career as a ladder, you can view it as a web. Career success is defined in many different ways: The big house and fancy car are not the only measures of success. Some people choose to follow a more balanced lifestyle with more time to spend with their family. Where, when and for whom you work are not necessarily fixed: Flexible work hours, working from home, part-time, temporary and contract work is all part of today’s world of work.

How can you develop your employability skills?

- Work through the information and activities on the *Prepare for job opportunities* section of the Directorate for Counselling and Career Development website (http://bit.ly/2ufeSA6).

- *The Muse* career website (https://www.themuse.com/advice) provides career advice related to your career questions.

- Quintessential careers.com has an extensive library of resources related to enhancing your employability. Go to http://www.quintcareers.com for more information.

- The Monster website (http://www.monster.co.uk/) provides a number of articles related to employability issues. Click on “Career Resources” and “Browse Career Advice” (at top of page) to access career-related information.

**Self-confidence**

Your personal experiences (for example, your relationships with your parents and siblings; how you related to peers and how you compare yourself to others) shapes your self-confidence. Low self-confidence on all areas of your life, mainly how you negotiate relationships, your career and your studies.

How much you believe in yourself or you do not believe in yourself impact on your success in your career and studies. Low self-confidence affects your career and your studies in several ways:

- Your confidence determines the effort and determination towards your studies and your career. For example, if you do not believe that you can pass a particular module, you also do not spend time studying, since when you start studying you feel like “what is the use – I will fail in any case”.

- If you keep on telling yourself that, you are not capable of completing your qualification because you have low self-confidence, challenges in your...
studies act as confirmation that you are a failure. You will then also not go out and get help since you do not think that it will make a difference – you are not hopeful that this could change how you perform.

- Even when you experience challenges that are normal for all students to experience, you tell yourself it is a confirmation that you cannot make it.
- You spend disproportional amounts of time and energy gathering evidence or reinforcing your belief that you cannot make it so that it becomes a reality.
- When you do things well or when you get positive results you deny them. You find it hard to accept that positive things can happen in your life and you find external factors that have contributed to the results or success.
- You will make statements such as “Maybe I was just lucky this time – the other candidates did not accept the offer due to a low salary offer” or “Maybe the lecturer felt sorry for me.”
- When you are presented with an opportunity, you will not use it since you are concerned about failing.
- You project a negative attitude towards yourself and others. You find it hard to appreciate the strengths of others and you are critical about others.
- You will not take risk to advance in your career because you think you will not make it. For example, you will not apply for an internship because you decide that you will not be selected even though you meet all the requirements.
- You are always concerned about how other people think about you in a negative way – you will not go and talk to the lecturer or ask other people because you think they will think you are stupid.

On the other hand when you have a healthy self-image:

- You accept yourself for who you are and you acknowledge that there are things you do well and things you do not do well.
• You use your strengths in one area to build your self-confidence in other areas.
• You acknowledge things people appreciate about you since you use these as a re-affirmation to develop areas where you feel you have room for growth.
• You believe you can achieve your desired career goals and you put your energy and resources towards your vision. This affects your studies in that you can talk to others about your study-related challenges and you are pro-active in terms of managing your studies since you know why you are studying.
• You are able to recognise and make use of presenting opportunities since you believe that you can contribute.
• You are able to help others understand your potential and you appreciate how others could contribute to your development.
• You are more able to deal effectively with feedback on your performance since you are able to integrate the feedback with your self-knowledge.

How do I build a healthy self-confidence?

Building self-confidence is a process – it is like building a house: Building your confidence starts with small, practical actions. As you get feedback about your actions, you take some positive things out of it about yourself and appreciate the things you can do well and those you have to develop.

Spend some time each day writing down things you did yesterday that you can be proud of and things you would want to do differently.

Give yourself time to develop – a house cannot be built in a day.

Most importantly, it must not be about thinking about things, but about doing things. This will not always be easy, but you need to take risk and test what you can do and also to see the results of your actions. For example, if you really want information about your
career, take risk and send an e-mail to your lecturer with questions to see what the response is. As you take risk, you need to change your attitude about how you view challenges and yourself. You will start thinking differently about challenges: that they are not meant to prove you as a failure, but rather to learn and discover new things about yourself.

You need to be able to embrace failure as part of the process in order to succeed. Your failures do not define you as a person: Even when you fail, you do not internalise the experience that you are a failure. You learn from the experience and you try again.

We want you to keep in mind your three circles (career, studies, and personal life) and make sure that you use one of the circles where you have more positive experiences to influence the other areas. For example, in your studies, you are getting good results and you are capable. However, you feel demotivated every time you think about your family situation.

Think about how the fact that you are succeeding with your studies could affect your career. Could it make you hopeful that you will be able to find a good job and then change your family’s situation in the future? Thinking more about the things you can control (for example, your studies and how this will impact positively on your career), enables you to minimise the sense of helplessness in terms of your family situation. When you focus on the things you can control, you create a positive outlook on yourself, your life and others.

My career learning plan

Your career learning plan will help you to stay focused on what you still need to do in order to find out more about your career development. The career learning plan focuses on the following questions: What is the information you still need? How will you get this information and by when?

Frequently-asked questions

I did not obtain an average of 60% for my undergraduate studies and now I do not qualify to continue with my Honours degree. What now?

You can explore the option of completing modules for non-degree purposes at another university as part of their occasional studies programmes. Occasional studies may be done full time or part time depending on the course. Contact the applications sections of these institutions for further information. Also, use this brochure to explore other career and study options should you not be able to continue with further studies in psychology.
I did not complete psychology as a major for my undergraduate degree and I now want to study further in this field. What now?

Unisa currently restricts enrolment for non-degree purposes due to the implementation of the new enrolment plan. Even though there may still be circumstances where students could qualify to study modules for non-degree purposes, you need to prepare yourself that this may not be a possibility at Unisa. You could still apply for an Honours degree and then motivate your application to be able to complete modules for non-degree purposes in order to meet the admission requirements for the Honours degree, in addition to exploring options at other institutions. Some universities offer modules for non-degree purposes as part of their occasional studies programmes. Occasional studies may be done full time or part time depending on the course. Contact different universities for further information.

I did not complete industrial psychology as a major for my undergraduate degree and I now want to study further in this field. What now?

You will need to complete an undergraduate degree with industrial and organisational psychology as a major subject (BCom General, BCom Industrial and Organisational Psychology, or BBA). You may apply to be exempted from specific modules based on your previous studies once you are registered for the degree. We also recommend that you explore options at other institutions. Some universities offer modules for non-degree purposes as part of their occasional studies programmes. Occasional studies may be done full time or part time depending on the course. Contact different universities for further information.
I want to be a child psychologist – what should I study?

You will need to ask yourself from what perspective and in which contexts you wish to work with children.

Educational psychologists deal mostly with the problems encountered by children in the education context. Their tasks range from testing learners’ intelligence, aptitude, interests and personality, to assisting learners with learning problems, to career guidance. They might also assist teachers to become more aware of the social factors influencing learners and provide guidance to parents regarding their children.

Clinical psychologists work directly with individuals at all developmental levels (including children), using a wide range of assessment and intervention methods to promote mental health and to alleviate discomfort and maladjustment.

Interventions in clinical psychology are directed at preventing, treating, and correcting emotional conflicts, personality disturbances, psychopathology, and the skill deficits underlying human distress or dysfunction.

Why are only a limited number of students selected each year for the professional training programmes at Master’s level?

These programmes require intensive training that can only be provided by suitably qualified academic staff. Since these departments do not have unlimited resources in terms of staff, only a few students are selected each year so that they can receive quality training and supervision.
What do I do if I am not selected for a professional training programme (such as the MA Clinical Psychology)?

Don’t let this discourage you from exploring the options available to you with a completed degree and/or Honours degree. You have already learned many skills that are relevant to different environments. For example, use your counselling and communication skills to facilitate youth groups to talk about issues confronting them in their community. Volunteering would be an important way for you to develop practical skills and to network with other organisations and people who can recognise your skills and offer you other opportunities that you might not have thought of previously. You can read more about career options for psychology students who do not continue with professional training options in a booklet that was compiled by Johann Louw at the University of Cape Town available at: http://www.psychology.uct.ac.za/what-can-i-do-my-psychology-degree.

What selection criteria are used for the MA Clinical Psychology programme?

The first round of selection is usually paper-based. Each university will have different types of information that will be requested from you. If you are invited to the selection interviews, selectors will usually observe your ability to communicate, how you relate to others in the group and deal with the pressure of the selection process. No one can tell you what to prepare, except that you go and allow yourself to be part of the selection process. Some Universities have specific criteria such as proficiency in three South African languages and community work experience. The application information and forms for programmes at different universities
will also inform you whether additional requirements apply.

I am not close to Pretoria – can I apply for the MA Clinical Psychology?

Students need to attend regular clinics, workshops, group discussions, and complete practical work. It is therefore not possible to complete this programme unless you live close to Pretoria.

Would I be able to practice as a counsellor/psychologist in another country?

Each country and states or provinces within that country would have different requirements for individuals to practice as counsellors and psychologists. Educational systems are also different. For example, in some countries, you need to have a Doctorate degree to practice as a psychologist, whereas in others it is a Master’s degree. It is recommended that you check with the licensing board/organisation in the country that you are interested in to find out about the requirements. In South Africa, all psychological practitioners have to be registered with the Health Professions Council of South Africa.

Unisa is currently not offering the BPsychequivalent programme for registered counsellors/psychometrists – what now?
Unisa is in the process of restructuring the program and might be in a position to offer it again, after attending to certain Unisa management and HPCSA requirements. Keep in mind that as with the previous BPsych equivalence programme there will be a selection process and only a limited number of students can be accommodated annually and also no guarantee that you would be accepted in the programme automatically.

The undergraduate and Honours degrees in Psychology and Industrial and Organisational Psychology are accredited and the options of doing a Master’s Degree in Clinical Psychology, Research Psychology, or Industrial and Organisational Psychology and Master’s by dissertation still remain open after the Honours degree in psychology. You may contact other institutions to enquire about completing training to register as a counsellor or psychometrist. Each institution has requirements in terms of registering for this programme, even if you have completed your Honours degree. It is important to start thinking about other options you could pursue given your qualifications, skills, interests and career vision. You are not limited only to qualify as a registered counsellor/ psychometrist. Use the information and activities in this book to explore more options.

What are the practical issues I should consider in terms of the Masters in Psychology (Clinical Psychology)?

Only 6-10 students are selected per year for the Clinical programme (at all Universities that offer this training). If you are not selected, do you have alternative options to further your career development? Do you have support for dealing with not being selected? Financial planning: you will be studying full-time for one or two years. Have you planned how you will fund your studies? Accommodation? Transport? Study-related expenses such as photocopying, printing, access to the Internet? If you have been earning an income and others depend on you, how will you plan for their
support? Support during your studies: The demands of the training require that you need to have substantial support from others - think about people you could talk to about some of the challenges. It might be people who have completed the programme, or just people who could create a space for you to share your experiences.
Career development services at Unisa

The Unisa Directorate: Counselling and Career Development offers career-, academic- and personal counselling services to Unisa students and the broader community. You can talk to a counsellor about:

- **Career decisions.** I am not sure which career path to follow; I don't know which qualification would be best; I want to change my career direction…
- **Career information.** How can I find out more about a career in …
- **Employability.** How do I market myself to employers? How can I look for work? How can I compile an effective CV? How do I go about networking with others? How do I put together my career portfolio? How can I meet potential employers? How can I improve my interview skills?)
- **My studies at Unisa.** How can I get started with my studies? How do I plan my studies? How can I study more effectively? I don't feel motivated to continue with my studies… I feel worried about preparing for/ writing the exams. I failed my exams – what now? I need to improve my reading/ writing/ numeracy skills
- **Personal issues.** How can I have better relationships with others? How can I cope more effectively with issues that impact on my studies?

Visit our website at [http://www.unisa.ac.za/counselling](http://www.unisa.ac.za/counselling) to access many self-help resources, or talk to a counsellor by e-mail to counselling@unisa.ac.za.
Acknowledgements

Thank you to the Unisa Department of Psychology for their input and continued support of this publication. A special thank you to Professor Fred van Staden and Dr. Elsje Cronje from the Unisa Department of Psychology for their input and support for this publication when we originally proposed the idea for this brochure in 1996.
